EDUCATION

RMIT University, Melbourne

2022-2024

Bachelor of Computer Science w/ Distinction

Certifications: [AWS Cloud Foundations](#), [Pre-Security Certificate](#)

SKILLS

Frameworks: ReactJS, NodeJS, FastAPI, AWS Cloud Services, SQLModel, Spring Boot, Flask, Bootstrap, Sequelize, Express

Programming Languages: Apex, Python, Rust, Java, JavaScript, HTML/CSS, Dart, C++, SQL, Kotlin

PROJECTS

RustySync

- Developed RustySync, a lightweight, cross-platform Rust-based tool for real-time file synchronization.
- Achieved sub-100ms change detection using file watching and content hashing (BLAKE3).
- Built a RESTful sync server with Actix-web and SQLite for state persistence.
- Applied systems programming, concurrency, and networking principles to deliver a performant MVP.

Android Cryptocurrency Miner

- Developed Android app with Kotlin and C++ so Android phones can mine cryptocurrencies as opposed to using computers.
- Created project as an open-source project so that other cryptocurrencies can use the code as a reference for their apps.
- Received 4 stars and has 5 forks, gaining 200+ downloads and 4.5-star rating on the Google App store.

Minecraft Man-in-the-Middle Attack Prevention

- Secured communication between Minecraft server and MCPI client using a CCA-secure protocol to prevent packet sniffing.
- Modified Minecraft Server files and MCPI library by implementing RSA encryption and SHA256-HMAC authentication.
- Successfully demonstrated implementation secureness using Burp Suite by attacking the connection using MITM attacks.

RELEVANT EXPERIENCE

Household Capital

Melbourne, AU

Junior Software Engineer – Hybrid

Nov 2024 – October 2025

- Developed custom Salesforce solutions using objects, metadata, Apex classes, triggers, and test suites, optimizing SOQL queries and adhering to governor limits to improve CRM performance.
- Built and maintained AWS Lambda functions using Python, Falcon, FastAPI, and Mangum, with automated testing and Terraform-managed infrastructure supporting scalable serverless architectures.
- Used Buildkite to automate deployment workflows across environments, integrating testing and validation to streamline release processes and ensure consistent, reliable application delivery.
- Developed responsive Flutter components for a customer portal with unit testing, applying clean, reusable UI patterns and development best practices to improve maintainability and user experience.
- Collaborated with cross-functional teams to gather requirements, resolve production issues, deliver business-aligned solutions, and participate in code reviews to maintain quality and support team development.

Freight Cyber

Melbourne, AU

Junior Software Engineer – Onsite

Nov 2024 – October 2025

- Developing responsive web applications using ReactJS and Python backend services, expanding the FCX platform from mobile-first to full-stack web solutions.
- Built and maintained APIs using NodeJS, Sequelize and Express for both mobile and web applications, ensuring seamless communication across platforms.
- Previously developed mobile application features using Java/Kotlin following MVVM architecture, gaining experience across the full technology stack.
- Deployed applications to AWS EC2 using GitHub CI/CD workflows and AWS secret manager, managing both web and mobile deployment pipelines.

CodePillow

Seoul, South Korea

Junior Python Developer - Remote

Dec 2021 – Feb 2023

- Built backend for a released NFT game based in South Korea, hosted by a Python API using FastAPI and SQLModel.
- Gained 580 active users, with over 1 million games played and 9 thousand NFTs issued.
- Connected local node to a backend with database support for exploring blockchain, built with FastAPI and SQLModel.
- Gained over 1000+ views and had more than 100 active users per day.

Upwork Australia

Melbourne, AU

Freelancer – Remote

Aug 2021 – Sep 2021

- Freelance work involved building a telegram bot to prevent spam in a channel. Built using Telegram JS API and SQLite database, preventing over 100 spammers from advertising malicious links.
- Kept constant communication with the owner of the channel to ensure that the requirements are met.

Centralex Exchange**Hong Kong, China***Freelancer – Remote**Nov 2020*

- Built a verification bot for a discord server to prevent spam using Discord.py and a SQLite database. Blocked 300+ bot accounts from flooding the server.
- Kept constant communication with the owner of the channel to ensure that the requirements are met.
